

Package #74

Coat the external ventricular drain catheter with a local, sustained■release albendazole formulation to reduce proteinaceous debris and clot formation within the catheter lumen

Technology Maturity: ENGINEERING_DEFINITION

Transfer Posture: Sponsored Validation

Problem: External ventricular drain catheter occludes with blood clot and proteinaceous debris within days of insertion, causing dangerous intracranial pressure elevation

Mechanism: Administration of albendazole reduces cystic fluid viscosity and protein content, potentially decreasing clot formation

Contents:

- 01 - Executive Technology Brief
- 02 - Engineering Technology-Transfer Dossier
- 03 - Buyer Decision Card
- 04 - Evidence Summary
- 05 - Transfer Manifest

Status: ENGINEERING_DEFINITION. Not physically validated.
