What this technology is

A recorded invention candidate for the problem: “inv:bench-p03-phe-biofouling:156ae5155c73”. The proposed causal mechanism: • Mechanism: Real-time distributed fiber optic sensing combined with microcapsule-based self-healing agents that release when corrosion is detected

- Intervention: Embedding microstructured optical fiber sensors and corrosion-activated microcapsules containing healing agents throughout the stainless steel cooling system components
- Expected Effect: Autonomous detection and repair of corrosion sit...

The problem addressed

- Problem Id: bench-p03-phe-biofouling
- Device: stainless steel plate heat exchanger in a district cooling loop
- Failure: biofilm and scale accumulation on plate channels reduces overall heat transfer coefficient and raises pressure drop between cleanings
- Failure Mode: fouling
- Constraint: sustain heat transfer coefficient above 2500 W/m²K for 12 months between mechanical cleanings without chlorination above 0.5 ppm residual

Why the problem matters

reliable operation of stainless steel plate heat exchanger in a district cooling loop

Invention summary

Intervention: • Mechanism: Real-time distributed fiber optic sensing combined with microcapsule-based self-healing agents that release when corrosion is detected

- Intervention: Embedding microstructured optical fiber sensors and corrosion-activated microcapsules containing healing agents throughout the stainless... applied at the recorded intervention site. Status: EVOLVED_INVENTION_CANDIDATE.

Current maturity

EARLY_TECHNICAL_EVALUATION — the invention architecture exists and survived the recorded challenge stages; parameters and engineering detail are proposals or unknown — nothing here is buyer-release quality

What is actually demonstrated

The architecture survived the recorded adversarial challenge, adjudication, and evolution stages; the evidence roles are itemized in 04. The 3D representation is a conceptual architecture (CONCEPTUAL_3D) — engineering CAD is unearned.

What is NOT demonstrated

Nothing in this package was measured in reality; no physical experiment has been run (validation status NOT_POSSIBLE_YET throughout, Art. XXXVIII). EXPERIMENTALLY VERIFIED is not claimed anywhere.

What a buyer receives

This package: the technical essay and engineering dossier, the buyer decision card, the evidence summary with roles, the transfer manifest, the machine-readable engineering layers (traceability, equations, unknown roadmap, validation economics), and the 3D artifacts this invention earned.

Decisive next action

Fund and run the recorded decisive experiment (physical bench/clinical experiment — NOT simulation) — the pre-registered rule either kills the architecture or graduates it to a sourced measurement.

Epistemic boundary: DESIGNED / SIMULATED / EVIDENCE-SUPPORTED / EXPERIMENTALLY VERIFIED states come only from the canonical invention object. EXPERIMENTALLY VERIFIED requires real reality-loop evidence. Potential IP territory — formal legal review required. Toscanini performs technology discovery; patentability, claim drafting, infringement/FTO and legal opinions are matters for qualified IP counsel.
