

Package #115

Implement a multidimensional assessment protocol for limb prosthesis design that evaluates clinical safety alignment, technical fit, contextual usability, documentation conformance, and regulatory interoperability

Technology Maturity: ENGINEERING_DEFINITION

Transfer Posture: Sponsored Validation

Problem: Documented recurring problem 'adverse_event_without_identified_device_' for limb prosthesis: 7 MAUDE reports across 6 distinct devices (20170921 to 20231114); root-cause evidence from 3 recall records and 7 event narratives (custody attached in the campaign report). MAUDE limitations: incidence UNKNOWN, causation UNVERIFIED (Art. XXI.5). Existing solutions fail because: Why existing solutions fail, per retrieved evidence: 3 recall root-cause descriptions (FDA enforcement records, custody attached); 7 MAUDE event narratives from this mechanism cluster (mdr_text, custody attached). Statements are the providers' own words, custo Unresolved gap: Across the 6 relevant retrieved attempts (a bounded, non-exhaustive set), none measurably addresses: conditions, devices, events, failure, function, injury, intervention, introducing, maintain, matching, modes, must, producing, recurring, reported, under, with

Mechanism: Multi-dimensional applicability index framework for evaluating regulatory alignment of international biomechanical standards

Contents:

- 01 - Executive Technology Brief
- 02 - Engineering Technology-Transfer Dossier
- 03 - Buyer Decision Card
- 04 - Evidence Summary
- 05 - Transfer Manifest

Status: ENGINEERING_DEFINITION. Not physically validated.
