
Toscanini 05 transfer manifest

invr452-fresh-evaporative-vaccine-coolerae7a00faa34a · run run · maturity EXPERIMENT_READY · 3D class ENGINEERING_3D

What is transferable

the recorded invention architecture for inv:r452-fresh-evaporative-vaccine-cooler:ae7a00faa34a with its evidence roles, the engineering projection (design inputs, failure modes, verification items, build plan, equations), the unknown roadmap, and the 3D artifacts this class earned (ENGINEERING_3D)

Artifact inventory

every file with sha256 in PACKAGE_MANIFEST.json; the machine-readable layers listed in 00; MODEL/ carries the parametric source and derived CAD when ENGINEERING_3D is earned

Engineering maturity

EXPERIMENT_READY — basis and counts in MATURITY_BASIS.json

Buyer capability needed

an engineering team able to take ENGINEERING_PROPOSED state to manufacturable definition (the design work named in the unknown roadmap) and to run the pre-registered decisive experiment — the context-specific buyer capabilities are recorded in the buyer decision card (What must the buyer bring?), derived from the canonical applicability state

You must verify

the buyer carries the verification duty for every transferred claim (nothing arrives pre-verified):

- VF-001: Compare thermal performance of coated vs uncooled units under controlled temperature cycling from 15°C to 45°C ambient
- VF-002: run killer experiment: falsification_test_from_candidate (EIG/cost 0.4557178723356231)
- VF-003: temperature-rise mapping at max duty
- VF-004: temperature-rise mapping at maximum duty with IR or embedded sensing (measured quantity: temperature rise)
- VF-005: thermal-resistance trend over accelerated cycling (measured quantity: mechanical stress / fatigue endurance)
- VF-006: temperature-rise mapping at max duty
- VF-007: worst-case ambient soak with staged power steps and stability monitoring (measured quantity: power / energy deposition)

Buyer and regulatory requirements (canonical applicability)

canonical problem context: UNKNOWN

buyer type: UNKNOWN — buyer class not determinable from the canonical problem text [UNKNOWN]

engineering capability: UNKNOWN — required engineering capability not determinable without a context decision [UNKNOWN]

manufacturing capability: UNKNOWN — required manufacturing capability not determinable without a context decision [UNKNOWN]

regulatory: UNKNOWN — regulatory applicability not determinable from the canonical problem text [UNKNOWN]

market channels: UNKNOWN — market channels not determinable without a context decision

[UNKNOWN]

Required tooling

CAD (STEP readers; CadQuery/OCCT for parametric rebuilds — see MODEL/PARAMETRIC_MODEL_SOURCE.py), mesh inspection (any STL viewer; trimesh used for the independent watertight check), and the bench equipment named in the build plan

Dependencies

no external services; the package is self-contained with real hashes (verify after transfer against PACKAGE_MANIFEST.json)

Confidentiality classification

CONFIDENTIAL — technical evaluation draft for the recipient's engineering diligence only; not a release document, not legal advice

Reproduction instructions

rebuild the geometry from MODEL/PARAMETRIC_MODEL_SOURCE.py + MODEL/PARAMETERS.json (the regeneration check records the expected measurements); verify every file against the manifest hashes

Open technical work

7 unknowns with resolution actions in UNKNOWN_ROADMAP.json — this is the recipient's first work queue

Epistemic boundary: DESIGNED / SIMULATED / EVIDENCE-SUPPORTED / EXPERIMENTALLY VERIFIED states come only from the canonical invention object. EXPERIMENTALLY VERIFIED requires real reality-loop evidence. Potential IP territory — formal legal review required. Toscanini performs technology discovery; patentability, claim drafting, infringement/FTO and legal opinions are matters for qualified IP counsel.
