

Package #52

Apply a micro■textured or hydrophilic anti■adhesive coating to the intraocular lens surface that resists capsule adhesion under mechanical stress, thereby preventing fluid retention and subsequent microbial colonization.

Technology Maturity: ENGINEERING_DEFINITION

Transfer Posture: Sponsored Validation

Problem: Post-operative endophthalmitis following intraocular lens implantation

Mechanism: Mechanical athalamia due to eye rubbing triggers forward IOL displacement, causing adhesion to the anterior capsule and trapping fluid.

Contents:

- 01 - Executive Technology Brief
- 02 - Engineering Technology-Transfer Dossier
- 03 - Buyer Decision Card
- 04 - Evidence Summary
- 05 - Transfer Manifest

Status: ENGINEERING_DEFINITION. Not physically validated.
