invfixturefluidics\_hydraulic0e8d4aa7fcfb8 · run r541-ranked-pkg-battery-a · maturity  
EARLY\_TECHNICAL\_EVALUATION · 3D class SYSTEM\_3D

## What this technology is

A recorded invention candidate for the problem: “inv:fixture:fluidics\_hydraulic:0:e8d4aa7fcfb8”. The proposed causal mechanism: • Mechanism: porous microstructure resists fluid-path tissue ingrowth. The proposed intervention realizes this mechanism by placing porous titanium proximal catheter tip in the shunt lumen at the failure site identified in the problem statement, where the governing physical effect produces sustained fluid flow through the shunt valve under the stated constraint (maintain long-term lumen patency an...

## The problem addressed

- Problem Id: fixture:fluidics\_hydraulic:0
- Device: CSF shunt system
- Failure: proximal catheter obstruction by tissue
- Failure Mode: OBSTRUCTION
- Constraint: maintain long-term lumen patency and flow

## Why the problem matters

reliable operation of CSF shunt system

## Invention summary

Intervention: • Mechanism: porous microstructure resists fluid-path tissue ingrowth. The proposed intervention realizes this mechanism by placing porous titanium proximal catheter tip in the shunt lumen at the failure site identified in the problem statement, where the governing physical effect produces sustained... applied at the recorded intervention site. Status: AUTOMATED\_INVENTION\_CANDIDATE.

## Current maturity

EARLY\_TECHNICAL\_EVALUATION — the invention architecture exists and survived the recorded challenge stages; parameters and engineering detail are proposals or unknown — nothing here is buyer-release quality

## What is actually demonstrated

The architecture survived the recorded adversarial challenge, adjudication, and evolution stages; the evidence roles are itemized in 04. The 3D representation is a conceptual architecture (SYSTEM\_3D) — engineering CAD is unearned.

## What is NOT demonstrated

Nothing in this package was measured in reality; no physical experiment has been run (validation status NOT\_POSSIBLE\_YET throughout, Art. XXXVIII). EXPERIMENTALLY VERIFIED is not claimed anywhere.

## What a buyer receives

This package: the technical essay and engineering dossier, the buyer decision card, the evidence summary with roles, the transfer manifest, the machine-readable engineering layers (traceability,

---

equations, unknown roadmap, validation economics), and the 3D artifacts this invention earned.

### **Decisive next action**

Fund and run the recorded decisive experiment (physical bench/clinical experiment — NOT simulation) — the pre-registered rule either kills the architecture or graduates it to a sourced measurement.

Epistemic boundary: DESIGNED / SIMULATED / EVIDENCE-SUPPORTED / EXPERIMENTALLY VERIFIED states come only from the canonical invention object. EXPERIMENTALLY VERIFIED requires real reality-loop evidence. Potential IP territory — formal legal review required. Toscanini performs technology discovery; patentability, claim drafting, infringement/FTO and legal opinions are matters for qualified IP counsel.
